

Tip: When screwing wire panels together ensure that the wire is situated on the inside of the run.

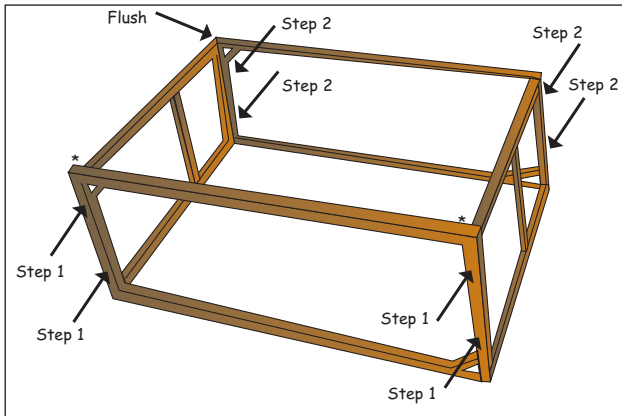

Step 1

Fix front panel to side panels with 2" screws through pilot holes provided (P.H.P).

Note: *Front panel should be higher at top than side panels.

Step 2

Fix back panel to side panels with 2" screws in P.H.P, panels should be flush at top and bottom.

Step 3

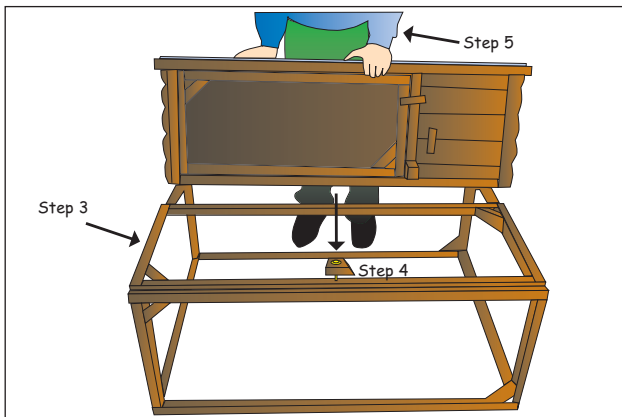

Place lid on top of side panels and butt it up against front panel. This is not fixed and can be removed.

Step 4

Attach turn button on top of front panel in middle to secure lid in place.

Step 5

The run is now ready for hutch to be positioned on top of run at back
